Navicure Joins Workgroup for Electronic Data Interchange

Healthcare IT vendor will help shape industry policies and standards related to information exchange and development

ATLANTA, March 13, 2007—Navicure, a leading provider of Web-based revenue cycle management (RCM) solutions, today announced that it has joined the Workgroup for Electronic Data Interchange (WEDI). As a member, the company will have access to WEDI's recommendations and guidelines as how best to interpret and implement healthcare transaction sets and even government regulations and policies. Navicure will also have the opportunity to help develop industry policies and standards.

"WEDI is a very well-respected organization with an extensive membership," said James Denny, president and CEO of Navicure. "We look forward to helping support their efforts to improve the quality of healthcare through the effective and efficient information exchange and management."

Navicure's automated, Web-based RCM solutions, which include claims management, electronic remittance posting and secondary claims processing, help physician practices quickly eliminate billing errors, identify payment trends and improve operational efficiency. All electronic transactions are processed in accordance with HIPAA's privacy and security requirements, and hundreds of EDI connections are supported—resulting in the ability to process a greater number of electronic transactions by reaching all payers who offer electronic capabilities.

About Navicure

Navicure provides automated, Web-based revenue cycle management (RCM) solutions that help physician practices improve operational efficiency and profitability. Serving thousands of physicians in practices nationwide, Navicure's solutions automate revenue cycle processes, including claims management, electronic remittance posting, secondary claims processing, advanced reporting, and ancillary services, such as patient statement processing, eligibility verification and data protection. For more information, please visit www.navicure.com.
